寻找 USDT 合约源码

创建 centralizedstablecoin.sol 文件 粘贴 usdt 源码

```
| SPHED SHRED BARGO MERGO MERG
```

黑名单机制时如何工作的?

1. 以 mapping 记录某用户是否是黑名单成员 (用 bool 值标记)

- 2. Addblacklist 和 removeblacklist 可以添加和删除黑名单用户 但是只有 owner 有权限
- 3. destroyBlackFunds 是核心机制

```
function destroyBlackFunds(address _blackListedUser) public onlyOwner {
    require(isBlackListed[_blackListedUser]);
    uint dirtyFunds = balanceOf(_blackListedUser);
    balances[_blackListedUser] = 0;
    _totalSupply -= dirtyFunds;
    DestroyedBlackFunds(_blackListedUser, dirtyFunds);
}
```

当一个用户是黑名单成员时候,owner 可以销毁此用户所有的财产 总财产也随之减少

说明 issue 方法和 redeem 方法的作用

Issue 方法是增加 tether? redeem 是减少 tether?

专业解释:用于与加密货币资产的托管机构(Tether)进行交互,允许用户购买/赎回 USDT密钥

说明 maximumFee 的作用及设置方式

控制某笔交易中收取的最大手续费,和 basisPointsRate 一起控制手续费

```
具体而言,如果想要收取 X 的手续费,需要满足如下条件:

1. X ≤ maximumFee × amount/10000

2. X ≥ minimumFee

其中,amount 表示待转移的 USDT 数量,minimumFee 是 USDT 转账手续费的最小值设定。

function setParams(uint newBasisPoints, uint newMaxFee) public onlyOwner {
    // Ensure transparency by hardcoding limit beyond which fees can never be added require(newBasisPoints < 20);
    require(newMaxFee < 50);

    basisPointsRate = newBasisPoints;
    maximumFee = newMaxFee.mul(10 ** decimals);

Params(basisPointsRate, maximumFee);
}
```

设置方式是由 setparams 修改, 收取的实际手续费将由 maximumFee 和转账数额乘以 basisPointRate 两个因素计算得出。

学习 remixd 的使用方法, 在命令行里面启动 remixd

Example command with flags:

remixd -s <path-to-the-shared-folder> -u <remix-ide-instance-URL>

```
F:\TextofCollege\3年级\区块链系统开发与实践\001>remixd -v
'remixd' 不是内部或外部命令,也不是可运行的程序
或批处理文件。
